

Volume 04 — Request for Proposal

1. RFP purpose

This RFP seeks delivery support for the SCAILED WP4 / EPIDATA Pathfinder V1 demonstrator. The supplier shall deliver a reviewable, deterministic EHDS readiness path planner and the documentation, data contracts, and evidence needed for D4.1 acceptance.

2. Expected supplier outcome

The supplier will provide a working demonstrator in a repository-managed doc-as-code and software workflow. A technical reviewer must be able to load approved fixtures, run an assessment for multiple stakeholder profiles, inspect traceability, and export a report.

3. Scope of services

WP4-RFP-1 Product and UX

- confirm the guided assessment flow;
- implement stakeholder and scenario selection;
- display readiness, path, blockers, warnings, and evidence;
- provide a clear demo/non-production disclaimer.

WP4-RFP-2 Deterministic assessment engine

- implement questionnaire and state derivation;
- implement roadmap positioning and path search;
- implement rule evaluation and priority handling;
- expose confidence and degraded states.

WP4-RFP-3 Data contracts and imports

- validate WP2, WP3, and WP8 payloads;
- preserve snapshot and schema versions;
- reject invalid activation without destroying the current active version;
- include sample fixtures and paired rule tests.

WP4-RFP-4 Traceability, audit, and reports

- record required events in an append-only audit chain;
- expose input, rule, roadmap, and regulatory references;
- export a reviewer report in HTML and/or PDF-ready form.

WP4-RFP-5 Deployment and handover

- document local/demo deployment;
- provide Compose or equivalent reproducible packaging;
- provide test, smoke, and acceptance instructions;
- conduct a handover session for EPIDATA/Charité reviewers.

4. Mandatory deliverables

ID	Deliverable	Acceptance evidence
DDRRFP-01	Source repository and setup documentation	Fresh technical reviewer starts the demo.
DDRRFP-02	Guided assessment UI/API	At least five stakeholder types can be selected and assessed.
DDRRFP-0	Deterministic rules and path planner	Three executable paths plus blocked/degraded examples.

5. Supplier response

The response should include:

- understanding of the V1 scope and non-goals;
- proposed architecture and technology choices;
- delivery plan mapped to the milestones in Volume 07;
- staffing and relevant experience in health data, interoperability, rules, or decision-support systems;
- quality, security, privacy, and testing approach;
- assumptions and dependencies on WP2/WP3/WP5/WP6/WP7/WP8;
- price by deliverable and any options;
- support and warranty period;
- examples of prior work and references.

6. Constraints

The supplier shall not introduce patient data into the demo; represent generated or unverified regulatory rules as authoritative; or expand V1 into production identity, direct infrastructure integration, AI copilot, or full cloud operations without an approved change request.

7. Evaluation criteria

Criterion	Weight
Understanding of scope and fit to D4.1	20%
Technical quality and determinism	20%
Data contracts, traceability, and auditability	15%
Demonstration and usability	15%
Delivery plan and risk management	15%
Team capability and relevant references	10%
Cost and commercial clarity	5%

Minimum technical threshold: the response must explain how it will produce reproducible recommendations, validate partner data, and expose uncertainty.

8. Commercial and intellectual-property assumptions

The parties shall agree ownership, licensing, reuse rights, open-source

obligations, dependency licenses, and treatment of partner-provided data before implementation. The supplier shall maintain a bill of materials and document any third-party service required for the demo.

9. RFP response checklist

- ☐ Scope and exclusions acknowledged.
- ☐ Deliverables mapped to acceptance evidence.
- ☐ Dependencies and assumptions listed.
- ☐ Security/privacy approach supplied.
- ☐ Test and handover plan supplied.
- ☐ Price and schedule supplied.
- ☐ IP and licensing position supplied.
